## N O T I C E .

---

IN issuing, by direction of the American Medical Association, a large number of extra copies of the report on "A Nomenclature of Diseases," presented at the last annual meeting of the Association, and in inviting the criticism of the Medical profession thereon, it is proper to state that a similar distribution was made in 1869 of the Nomenclature of Diseases published by the Royal College of Physicians of London, accompanied by a similar invitation, but that very few proposals for amending the scheme were received from any quarter; and that such of these as appeared judicious are embodied in the present report. As, however, the proposed American system differs from the English in several of its prominent features, and in very many of its details, and as it is desirable to have all its parts improved as far as possible by suggestion and criticism, it is requested that communications upon the subject should be addressed at the earliest day to

FRANCIS G. SMITH, M.D.,  
*Chairman of the Committee on Nomenclature,*  
1504 Walnut Street, Philadelphia.

## REPORT OF COMMITTEE ON NOMENCLATURE OF DISEASES.

---

Dr. FRANCIS G. SMITH, of Pennsylvania, chairman of the Committee on a Nomenclature of Diseases, reported as follows:—

In accordance with instructions given to them by the Association in 1870, the committee have prepared a Nomenclature of Diseases, to be recommended to the medical practitioners of the United States for adoption and observance. It will be remembered that the committee appointed at New Orleans in 1869, to determine what alterations, if any, are necessary, to adapt the Provisional Nomenclature of the Royal College of Physicians of London to general use in the United States, reported at Washington, that the English Nomenclature was not adapted to this end, and recommended the appointment of a new committee to prepare a Nomenclature of their own. This committee are now prepared to submit the results of their labors. The system of Nomenclature offered is based upon that of the Royal College of Physicians of London, with such additions and modifications as in the judgment of the committee were needed. The general divisions of that work have been adopted, although the order of their succession has been materially modified, and the whole is preceded by a general nomenclature of morbid conditions, such as do not constitute special diseases. It must be remembered that the Nomenclature adopted by the Royal College is *strictly* provisional, and that provision was made for its modification, as necessity might demand. It was expressly set forth, not as possessing absolute scientific accuracy, but as a contrivance for securing the use of the same name for the same disease, and “for

perfecting the statistical registration of diseases, with a view to the discovery of the laws which determine their causes, phenomena, and results." The same may be said of that which your committee present; it also is provisional, and must be subject to such alteration and revision as experience may prove desirable.

In selecting Latin equivalents for English names of diseases, the committee have frequently departed from the example of the English Nomenclature, in which, as far as possible, Latin terms of classical authority have been employed. Their reasons for doing so are briefly these:—

1. A large number of diseases now commonly recognized were totally unknown to the ancients.

2. The language of medicine, like that of law, abounds in technical Latin terms of mediæval or later origin, and these are the only terms by which the things signified by them are generally known.

3. To express the ideas of modern science in classical Latin often involves the use of periphrases which tend to obscure, instead of making them clearer.

In the Nomenclature of the Royal College of Physicians of London, precedence is given to the Latin over the English names. Your committee have reversed this arrangement, believing that wherever English names exist, they should be preferred, because they are more intelligible to the greater number of practitioners, and because the tendency is everywhere increasing to use vernacular idioms in naming diseases. Latin synonyms for them are, however, annexed, which have a definite meaning for the medical profession in all civilized nations.

The committee have been engaged for two years in the preparation of its Report, and have held nearly fifty meetings. Whatever defects, therefore, it may present, cannot, they think, be laid to a want of industry or care.

They have to deplore, with many others, the loss by death of a valued member of their body, Dr. SAMUEL HENRY DICKSON, who, by his extensive learning, wide experience, and cultivated intellect, gave great aid to their labors; and, although his failing health pre-

vented his being a constant attendant on the meetings of the committee, his sympathies were always with its work, and his counsel was promptly and cheerfully given. In common with this community in which he lived, and with this Association, we mourn his loss.

In order to expedite and facilitate the work devolving upon them, the committee was early divided into sub-committees of Practical Medicine, Surgery, and Obstetrics, to each of which was assigned the study of a special department, the results of which were reported to the general committee for approval. By invitation of the general committee, Dr. J. ASHHURST, Jr., was added to the sub-committee on Surgery, and Dr. W. GOODELL to that on Obstetrics. To each of these gentlemen, the committee desire to express their thanks for the valuable assistance which they rendered. In concluding this brief report of their labors, the fruits of which are seen in the printed matter now presented to the Association, the committee respectfully offer the following resolutions:—

*Resolved*, That the Report of the Committee on the Nomenclature of Diseases be referred to a special committee of five members, to be appointed by the President, who shall examine it, and report upon its final disposition, at the present meeting of the Association.

*Resolved*, That on the favorable report of such committee it shall be referred back to the Committee on the Nomenclature of Diseases, for the preparation of an Index to be published with it in the forthcoming volume of the Transactions.

Dr. J. J. WOODWARD, of the U. S. Army, offered a minority report, as follows:—

A minority of the Committee on Nomenclature have the honor to report:—

That while they entertain the highest respect for the abilities and learning of those members of the committee whose residence in Philadelphia has enabled them to attend its meetings and aid in the production of the report which has just been submitted, they nevertheless feel it a duty to express their earnest conviction that the adoption of a Nomenclature and Classification by this Association is a matter of too great importance to be acted upon hastily, before the members have had any opportunity to examine for themselves the Nomenclature and Classification proposed.

The minority of the committee have had no opportunity to examine the proof-sheets of the work until since the commencement of the present meeting of the Association, and the time since then has been far too short for them to form an opinion as to details. They do not, therefore, wish to be understood as criticising the work done in any way, but simply ask, as a measure of justice and wisdom, that it may be submitted to the judgment of the profession before it is acted upon by this body.

They have the honor, therefore, to offer the following resolution as a substitute for the resolution offered by the majority.

*Resolved*, That the Nomenclature and Classification just submitted by the committee be published in the Transactions; that one thousand extra copies be printed in pamphlet form and distributed to the profession, and that the question of the adoption of the proposed Nomenclature and Classification by this body be postponed till the next annual meeting.

Signed, A. B. PALMER, of Michigan.  
J. J. WOODWARD, of U. S. Army.  
GEO. A. OTIS, of U. S. Army.  
AUSTIN FLINT, of New York.

On motion of Dr. A. B. PALMER, of Michigan, both reports were accepted.

The resolution attached to the report of the minority was adopted.
